Issued/Filed Dates: **April 18, 1989 / Oct. 13, 1987**

Application Number: **JP1987000257526**

IPC Class: **C04B 14/36; C04B 26/04; C04B 26/04;**

Abstract:

Purpose: To contrive formation of a graphite/resin composite material having excellent tensile strength, liquid impermeability and flexibility, by containing a cured material of polyvinyl butyral resin and a thermosetting resin in a molded body of expanded graphite.

Constitution: A graphite resin composite material formed by containing a cured material of polyvinyl butyral resin and a thermosetting resin in a molded body of expanded graphite. Phenolic, epoxy, polyimide, melamine, unsaturated polyester and furan resins, etc., are cited as the thermosetting resin. A method for previously preparing a mixture solution of the thermosetting resin with the polyvinyl butyral resin, impregnating the expanded graphite with the solution and curing the solution is preferred as a method for containing the resin in the expanded graphite. The amount of the polyvinyl butyral resin is temperature 0.5W5wt.% based on the thermosetting resin.
